Feature overview

360 conversation in car

A manual program that focuses on speech in a car, regardless of where people are sitting.

AntiShock 2

Instantly suppresses sudden, loud and irritating sounds without affecting speech.

AutoFocus 360 (tech level 9)

AutoFocus 360 uses a binaural network of four microphones to determine where speech is coming from. It automatically steers the beamformer and it also applies dynamic noise reduction when speech is from the front.

AutoFocus (tech level 7)

AutoFocus uses a binaural network of four microphones to determine if speech is coming from the front or another direction. For all directions (other than front) it activates a fixed-wide directional pattern. For speech from the front, AutoFocus adjusts the beamformer forward and applies dynamic noise reduction.

Automatic Adaptation Manager

Automatically and quickly helps transition new wearers from a comfortable first fit to a full target fitting.

AutoMic (tech level 1)

Works continuously in quiet environments to provide awareness and listening comfort, and in noisy environments to emphasize speech and minimize background noise.

Binaural Acoustic Phone

Wirelessly streams audio signals from the cellular or landline phone ear to the other ear without a separate accessory.

Coach

Helps your clients integrate hearing instruments into their lives with personalized, timely and helpful tips, reminders, and advice.

DuoLink

Provides binaural coordination of program/volume changes for each of the available hearing instrument user controls.

Dynamic noise reduction

A spatial noise canceller within AutoFocus and AutoFocus 360 that reduces interfering background noise in conversations to focus on speech from the front.

Equalizer

Provides clients with the ability to customize their sound by making independent (and persistent) changes to bass, mid and treble in any program within the Remote Plus app.

Feedback manager

Uses phase cancellation to instantly suppress annoying whistling or feedback.

First Fit

Enables you to fit your clients in as few as four clicks while facilitating easier adaptation for new hearing instrument wearers.

FLEX:TRIAL™

Allows your clients to experience amplification outside the clinic and in the real world where they live, work and play.

FLEX:UPGRADE™

The only globally offered solution that allows you to easily upgrade your client's current hearing instruments to a higher technology level.

Frequency compression 2

Compresses high-frequency sounds, that would otherwise be inaudible, into lower, more audible ranges.

HyperFocus

For face-to-face conversations in loud noise, HyperFocus engages within the conversation in loud noise environment, applying a more highly-focused, binaurally created beam to the front.

Integra OS

An advanced signal processing system that combines powerful binaural communication and automatic optimization of sound performance. It classifies the sound environment and adjusts accordingly.

Log It All

Captures real-life data enabling you to give more personalized recommendations to your clients based on their real-world listening lifestyle.

Media

Allows the hearing instruments to classify streamed speech and streamed music.

Microphone mode

A range of microphone options is available ranging from omni to adaptive directional with defaults set depending on technology level and automatic environment or manual program.

Noise reduction

Detects competing background noises and reduces their volume accordingly.

Pinna Effect 2

Uses a binaural network of four microphones

to apply targeted directivity variably and asymmetrically across the frequency range to minimize the impact of acoustic cues typically lost with hearing instruments.

Pinna Effect

Applies a small degree of directivity in the mid and high frequencies to minimize the impact of acoustic cues typically lost with hearing instruments.

PRISM™

'Processing Real-time Intelligent Sound Management' chip that offers double the memory of our previous chip.

Ratings

Allows your clients to provide in-the-moment feedback through the Remote Plus app, while capturing hearing instrument settings to help make your counseling more efficient and personalized.

Remote Adjust

You can make fine-tuning adjustments and deliver professional care that's convenient for you and your clients, no matter where they are.

Remote Plus app

A smartphone app that is a remote control for hearing instruments, offers clients personalization features, and gives HCPs insights to provide the best level of care.

Soft speech lift

Enhances the subtle nuances of speech without amplifying low-level environmental noise.

Speech enhancement

Boosts speech by increasing the volume of voices during conversations.

Success Check

Allows you to view your client's usage data, Log It All score, Ratings and more – receive alerts to successes or barriers without the need to connect hearing instruments to fitting software.

Tap control

Accelerometer that detects a double tap and enables easy access to Bluetooth functionalities.

Tinnitus masker

Noise generator intended to provide a sound enrichment source.

Wind control

Automatically reduces wind noise.
